

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

1. (Currently Amended): Peripheral equipment of a computer comprising:
a communication section connected to the computer via a network;
an operation section to perform an operation of changing a network setup of said communication section;
a first storage section to save a current ~~network setup value~~ IP address set in said communication section;
a second storage section ~~to previously store in which a fixed network setup value; IP address is previously stored;~~
means for saving in said first storage section the ~~network setup value~~ IP address set in said communication section in accordance with an operation command from said operation section; and
means for setting in said communication section the fixed ~~network setup value~~ IP address stored in said second storage section, in place of the saved ~~network setup value~~ IP address.
2. (Currently Amended): The peripheral equipment of a computer according to claim 1, further ~~comprising~~ comprising:
means for resetting the fixed ~~network setup value~~ IP address set in said communication section to the ~~network setup value~~ IP address saved in said first storage section in accordance with another operation command from said operation section.
3. (Canceled).
4. (Canceled).

5. (Original): Peripheral equipment of a computer comprising:
a communication section connected to the computer via a network;
means for transmitting and receiving various types of adjusted values and service information of said equipment to/from the computer by using said communication section;
an operation section to perform an operation of changing a network setup of said communication section;
a first storage section to save a current IP address set in said communication section;
a second storage section to previously store a fixed IP address which enables communication with a computer having a specific network setup;
means for saving in said first storage section the IP address set in said communication section in accordance with an operation command from said operation section;
means for setting in said communication section the fixed IP address stored in said second storage section, in place of the saved IP address; and
means for communicating with the computer having the specific network setup by using the fixed IP address set in said communication section.

6. (Currently Amended): The peripheral equipment of a computer according to claim 5, ~~further comprising~~ further comprising:
means for resetting the fixed IP address set in said communication section to the IP address saved in said first storage section in accordance with another operation command from said operation section.

7. (Currently Amended): Peripheral equipment of a computer comprising:
communication means connected to the computer via a network;
operating means for performing an operation of changing a network setup of said
communication means;
first storing means for saving a current ~~network setup value~~ IP address set in said
communication means;
second storing means ~~for previously storing in which a fixed network setup value;~~ IP
address is previously stored;
means for saving in said first storing means the ~~network setup value~~ IP address set in
said communication means in accordance with an operation command from
said operating means; and
means for setting in said communication means the fixed ~~network setup value~~ IP
address stored in said second storing means, in place of the saved ~~network
setup value~~ IP address.
